RE: Mine Resistant Ambush Protected vehicle acquired through 1033 Program

To Whom It May Concern:

On April 29, 2014, the Benton County Sheriff's Office obtained a Mine Resistant Ambush Protected vehicle (MRAP) through Law Enforcement Support Office 1033 Program. As of that date, our office has implemented a policy for the operation and training of the MRAP vehicle. The purpose of obtaining this vehicle is for it to be utilized by the Benton County Sheriff's Office Special Weapons and Tactics Team for the protection of officers and citizens during high risk operations for the safety of persons from threats such as, but not limited to potential gunfire.

The policy has guidelines for the operation and maintenance of the vehicle. A deputy that has NOT received the appropriate training will not be allowed to operate the MRAP vehicle. Furthermore, drivers will have (at a minimum) an Arkansas Class B Commercial driver's license. The training will consist of the following:

- ✓ Overview of the vehicle to include its capabilities and limitations
- ✓ Characteristics of the vehicle so the operators will have knowledge of its size and weight
- ✓ Basic maintenance
- ✓ Safe operating speeds
- ✓ Movement and maneuver
- ✓ Ground Guiding techniques for safe operation in small areas due to limited visibility
- ✓ Operation on slopes
- ✓ Restricted terrain
- ✓ Rough terrain driving
- ✓ Vehicle tip and rollover
- ✓ Steering and proper maneuvering
- ✓ Mount and Dismount
- ✓ Falls, smashed, and pinched extremities
- ✓ Use of seatbelts
- ✓ Risk of contact with low hanging objects such as power lines

Currently, the Benton County Sheriff's Office has four (4) trained personnel who have been through the MRAP Training course and possess an Arkansas Class B CDL. Three of the four went through the training through the Joint Program Office with Jeffery Bury & Paul Smith as the trainers. One of the four personnel was active duty in the United States Army and had been deployed to Iraq/Afghanistan and his responsibilities were maintenance and driver of the MRAP. He was trained on the MRAP and Super HET (Heavy Equipment Tractor) in 2004. He completed the training in Kuwait by the U.S. Army.

If anything further is needed, please do not hesitate to contact me.

POLICIES AND PROCEDURES

SUBJECT	MRAP Operations		
NUMBER	411.3	EFFECTIVE	6/1/15
Scheduled Review Date	6/1/16	ISSUE DATE	6/1/15
APPROVED BY	SHERIFF CRADDUCK	REVISION DATE	

PURPOSE:

The Benton County Sheriff's Office obtained a Mine Resistant Ambush Protected (MRAP) Vehicle through the LESO 1033 Program. The purpose of this vehicle is that it will be utilized by the Benton County Sheriff's Office for the protection of law enforcement officers and citizens during high risk operations for the safety of persons from threats such as but not limited to potential gunfire. Additional uses of this vehicle will be to assist citizens during natural disaster events to navigate through extreme terrain or to drive through damaged areas to assist citizens affected by such disasters.

1. Mine Resistant Ambush Protected Vehicle (MRAP)
 - i. Vehicle designed to transport personnel and/or equipment at the scene of a tactical operation while providing ballistic protection for the occupants.
 - ii. Assigned operators will keep an inventory of all equipment stored in the MRAP and will notify the Team or Assistant Team Leader to replace items as needed due to use.
 - iii. Only approved team member(s) will be responsible for driving the MRAP to call-outs and ensuring that it is maintained, well kept, and organized.
2. MRAP Guidelines
 - i. Training requirements: 8-hour basic operator course and 4 hours a year for primary and alternate operators. Operators will also possess a valid Arkansas Class B Commercial Driver's License.
 - ii. Ground guide not required during tactical deployment; recommended under all other conditions.
 - iii. Pre-trip inspection prior to normal operation; may be disregarded under tactical deployment, if monthly check has been performed.

Page 1 of 2	Effective Date: 8/1/14
Subject: MRAP Operations	Number: 411.3

- iv. Monthly inspection, to include running the motor while parked for one hour - System check to be performed during weekly inspection to include security.
- v. Code III response to any deployment site is not authorize without TTC approval.
- vi. Parking or storage: when not deployed or at maintenance facility, the MRAP must be parked in an area designated by the commander at the Benton County Sheriff's Office.

MAINTENANCE AND STORAGE:

1. The vehicle shall be secured from public access during storage. This can be accomplished minimally by locking doors, turning off all power systems, and/or by storage in a secure building or structure from public.
2. The vehicle will be kept maintained in a safe and sustainable operating condition and will be in a response capable condition at all times.
3. Any conditions identified during inspection and maintenance that may render the vehicle unsafe for use shall require that the vehicle be taken out of service, tagged, and notification made to the SWAT Commander and/or Operations Commander immediately. The vehicle shall not be used until such time that it has been repaired and/or rendered safe to operate.

TRAINING AND OPERATION:

1. No personnel will be allowed to operate the vehicle without training.
2. The training may be completed by in-service staff instructors, who have completed a train-the-trainer course, or by a contracted company or trained military member who has extensive experience or qualifications with this type of vehicle.
3. Training shall include classroom instruction and a hands on / drivers training components.
4. The training shall at a minimum consist of the following:
 - Overview of the vehicle to include its capabilities and limitations.
 - Characteristics of the vehicle so the operators will have knowledge of its size and weight.
 - Basic Preventative Maintenance Checks & Services (PMCS).
 - Safe operating speeds.
 - Steering, movement and maneuvering.
 - Visibility concerns.
 - Operation of controls and indicators.
 - Ground guide techniques for safe operation.
 - Operation on slopes.
 - Restricted terrain.
 - Rollover hazards and egress procedures.
 - Mount and dismount.
 - Falls, smashed, and pinched extremities.
 - Use of seatbelts.
 - Risks of contact with low hanging objects such as power lines.

ARMORED RESCUE VEHICLE (ARV) OPERATIONS

Lesson Plan (2015)

I. Introduction

- A. Capt. Scotty L. Hodges, Benton Police Department**
 - 1. Full-time law enforcement officer**
 - 2. SWAT Team Captain**
- B. This 4 hour block of training will consist of class room training, as well as hands on training. Driving and practical skills will be applied.**

II. Goals

- A. Students will become familiar with the basic operations of the ARV.**

III. Performance Objectives

- A. The student will be able to identify the Power kill switches.**
- B. The student will be able to identify the control panel, all gauges and lights, as well as switches.**
- C. The student will be able to identify the routine maintenance required.**
- D. The student shall be familiar with the passenger capacity, as well as, load weights.**
- E. The student shall be familiar with the vehicle operations and limits of its operations.**
- F. The student shall be familiar with the vehicle recovery operations and the limits of its recovery abilities.**

Benton Police Department

Policy:

Effective:

4/24/2015

Date of Origin:

4/24/2015

Armored Rescue Vehicle (ARV) Operations

I. Purpose

- A. This policy provides clear guidelines for the safe and effective deployment of the Benton Police Department's *Armored Rescue Vehicle* (ARV).

II. Policy

- A. It shall be the policy of the Benton Police Department to develop and implement a policy that provides guidelines on the manner in which the ARV is deployed and maintained.
- B. The policy will also contain guidelines that establish a mandated training program for all personnel responsible for the ARV's operational deployment. All department personnel shall recognize and adhere to the guidelines set forth within this policy.

III. Procedures

A. ARV Deployment

- 1. The Benton Police Department's ARV is assigned as a tactical unit to the SWAT team to be utilized in the mitigation of tactical situations requiring its use. More specifically, the ARV is intended to be deployed during tactical situations that require additional protective measures for police officers, who have encountered or might encounter gunfire or other hazardous situations during the performance of their duties.
- 2. The Benton Police Department may also deploy the ARV to assist the citizens of our jurisdiction during natural disaster events that require the delivery of police services or rescue measures, to include extreme terrain or high water events.
- 3. In the event the ARV is deployed under the tenets of mutual aid, the Benton Police Department will always provide personnel trained to operate the ARV. BNPD personnel shall have the final decision regarding the safe and appropriate use of the ARV. All requests for deployment of the ARV must be approved by the Chief of Police or his designee.

B. ARV Operation

- 1. The Benton Police Department's ARV may only be operated by personnel within the agency having been specifically trained to operate and maneuver the ARV in a safe and effective manner.

2. Personnel who are assigned the responsibility of operating the ARV shall complete training approved by BNPD.
3. Only authorized department personnel shall drive the ARV. All such operators shall have completed the training as required within this policy. All personnel shall follow departmental policy during the ARV's operation.
4. Training curriculum must be approved by the Chief of Police. All department training shall consist of classroom and practical hands-on training within the following specified topics:
 - a. Overview of the ARV to include its capabilities and limitations;
 - b. Characteristics of the ARV so operators will maintain detailed knowledge of the unit's size and weight;
 - c. Basic maintenance;
 - d. Safe operating speeds;
 - e. Effective methods for the proper maneuvering and steering of the ARV;
 - f. Ground guiding techniques for the safe operation of the ARV in areas containing diminished visibility;
 - g. Operation of the ARV on slopes, grades, and hills;
 - h. Restricted terrain;
 - i. Operating the ARV on rough or uneven terrain features;
 - j. Specific information relating to the ARV's propensity for rollover;
 - k. Danger areas that could result in falls, smashes, or pinched extremities;
 - l. ARV egress procedures during rollovers;
 - m. The use of seat belts; and
 - n. The risks associated with contacting high voltage power lines.

C. ARV Maintenance and Storage

1. The ARV will be maintained by personnel assigned to the SWAT Team. As such, they shall ensure the ARV is serviced and maintained in accordance to the manufacturer's recommendations as required.
2. The ARV shall be maintained in an operationally ready status.

Mark Kizer, Chief of Police

James Ray
Arkansas LESO,

James the Bryant Police department sent 3 senior officers to MRAP training on July 2, 2014 after receiving our MRAP. The training class was put on by *Smith Integrated* and was a train the trainer class. Since that date those 3 officers conducted a training class and trained 10 more officers with the Bryant Police Department Emergency Response Team. The Bryant Police Department also plans to do refresher training every 6 months.

It is the policy of the Bryant Police Department that only trained personnel operate the MRAP that is assigned to the Bryant Police Department.

Respectfully,

A handwritten signature in black ink, appearing to read "Mark Kizer", with a long, sweeping horizontal line extending to the right.

Chief Mark Kizer

CABOT POLICE DEPARTMENT

CABOT, ARKANSAS 72023

Mine Resistant Ambush Protected Vehicle (MRAP)

This policy is for internal use only and does not enlarge an employee's civil liability in any way. The policy should not be construed as creating a higher duty of care, in an evidentiary sense, with respect to third party civil claims against employees. A violation of this policy, if proven, can only form the basis of a complaint by this department for non-judicial administrative action in accordance with the laws governing employee discipline.

Applicable Arkansas Statutes:

Date Implemented:

- I. Purpose:** Mine Resistant Ambush Protected Vehicle (MRAP)
A vehicle designed to transport personnel and/or equipment to the scene of a tactical operation while providing ballistic protection for the occupants.
Additional uses of this vehicle will be to assist the citizens of Cabot during natural disaster events to navigate through extreme terrain or drive over damaged areas to assist citizens affected by such disasters.
- II. Policy:**
 - A. An inspection, to include running the motor while parked for one hour, will be quarterly.
 - B. A system check and security check will be performed quarterly.
 - C. A pre-trip inspection prior to normal operation is required. This may be disregarded under a tactical deployment.
 - D. A ground guide (Back-up spotter) is not required during tactical deployment but recommended under all other conditions, including training.
 - E. Code Three response to any deployment site is not authorized without the approval of the Chief of Police or his designee.
 - F. An escort Police Unit will be utilized anytime the MRAP is in use while driving any public roadway.
 - G. When not deployed or at a maintenance facility, the MRAP must be parked in an area approved by the Chief of Police or his designee.
 - H. An eight (8) hour basic operator course will be required to operate the MRAP. After the initial operator course is completed, all SORT Members/Operators will be required an additional four (4) hours of annual training.

- I. The Chief of Police or his designee will designate a SORT Member/Operator responsible for driving the MRAP to call-outs, training and ensuring that it is maintained, well-kept and organized.
- J. SORT Team Leader and/or Assistant Team Leader will keep an inventory of all equipment stored on or in the MRAP and will notify the SORT Team Commander of items that need to be replaced as needed.

III. Training:

- A. Basic pre-deployment safety and operation inspection.
- B. Vehicle operation principles

Operating Speeds and Slope Restrictions:

- 1. MRAP vehicles have relatively quick acceleration and high top speeds for vehicles of their weight and size. Most operations will not require use of all the speed the MRAP vehicle can deliver. Its dash speed will permit rapid movement between covered and concealed positions or when breaking contact. Remember to avoid rapid steering movements, especially during dashes.
- 2. Ultimately, the element leader will determine and set the rate of movement based on thorough understanding of mission, enemy, terrain, weather and civil considerations. Operating MRAP vehicles at high speed in a tactical environment will get drivers into a dangerous situation faster than they can counter or react to it.
- 3. Safety reminders while operating MRAP vehicles
 - a. Driving at high speed does not increase safety or security during tactical operations. Higher speeds reduce driver reaction time, extend stopping distances and increase roll rates that can lead to tip over/rollover.
 - b. Traveling at high speeds (anything greater than 25 mph) significantly decrease the ability to accurately visually scan the road surface and shoulders for hazards.
 - c. Slow speeds and careful observations greatly increase the chance of spotting hazards.
 - d. MRAP vehicles are generally very tall with a high center of gravity, which greatly increases the chance of a rollover/tip over. Slow speeds will reduce the possibility of an accident.
- C. Off-road operations
- D. Vehicle safety features
- E. Emergency vehicle shutdown procedures
- F. Annual monitored vehicle driving examination, to include vehicle start-up, forward motion, reverse motion, turns, proper vehicle shutdown and verbal review of off-road operations and emergency procedures.

G. Fire Drill

1. Crew announces "FIRE!" and gives the location;
 - a. Crew Compartment
 - b. Engine Compartment
2. Crew waits for vehicle to stop moving.
3. Crew checks for casualties and uses fire blanket if equipped and/or required
4. Crew secures weapons and gear (if able).
5. Driver turns vehicle off.
6. Vehicle commander notifies Chain of Command of the incident.
7. Crew uses available fire extinguishers to suppress fire.
8. Vehicle commander orders "Bail out!" and gives direction to the rally point.
9. All personnel exit the vehicle, a head count is completed by the vehicle commander upon exit
10. Crew and personnel meet at designated rally point.

IV. Driving Course: The listed driving course is a familiarization with the MRAP and shall be practiced and documented by each operator annually. All documented training on the MRAP will be forwarded to the Team Commander and the Cabot Police Department Training Officer.

- A. See attached driving/training guidelines that must be completed annually.

Cabot Police Department MRAP Road Course and Training

Annual MRAP Certification. Requires a minimum of ½ hour of evaluated driving while completing the following:

- a. Four (4) left hand turns ☐☐☐☐ Four (4) right hand turns ☐☐☐☐
- b. Two (2) straight sections of urban business street or a two lane rural road approximately one (1) mile in length. ☐☐
- c. Three (3) through intersections ☐☐☐ Three (3) intersections where a stop has to be made ☐☐☐
- d. One (1) railroad crossing ☐
- e. Two (2) left curves ☐☐ Two (2) right curves ☐☐
- f. One (1) entry and exit on a limited access roadway ☐
- g. Two (2) lane changes ☐☐
- h. Two (2) passing maneuvers ☐☐
- i. One (1) downgrade drive ☐
- j. One (1) upgrade Drive ☐
- k. One (1) underpass, low clearance or warning sign (actual or simulated) ☐
- l. Two (2) backing maneuvers, straight and angled ☐☐

To Whom It May Concern

As of the 29th day of May 2015, the Craighead County Sheriff's Office has implemented a policy of the operation and training of the MRAP vehicle obtained through the LESO/1033 program. The purpose of this vehicle is to be utilized by the Craighead County Special Weapons and Tactics team for the protection of officers during high risk operations for the safety of such officers from potential gunfire while in the performance of their duties. Additional uses of this vehicle will be to assist the citizens of Craighead County during natural disasters events to navigate through extreme terrain or drive over damaged areas to assist citizens affected by such disasters.

The policy also has guidelines for the operation and maintenance of the vehicle. It states that no officer will be allowed to operate the vehicle without such training. The training at this time is conducted by a trained deputy with this department who has received training in the use and operation by Smith Integrated Technology M.R.A.P. Logistical Sustainment Group. All training curriculum used in training is derived from the Center for Army Lessons Learned published by Maneuver Center of Excellence at Fort Benning, titled MRAP Observations, Insight, and Lessons and BAE Systems MRAP Instructor Guide. This training will consist of the following:

- Overview of the vehicle to include its capabilities and limitations
- Characteristics of the vehicle so the operators will have knowledge of its size and weight.
- Basic maintenance
- Safe operating speed
- Movement and maneuvers
- Ground guiding techniques for safe operation in small areas due to limited visibility
- Operations on slopes
- Restricted terrain
- Rough terrain driving
- Vehicle tip and rollover
- Steering and proper maneuvering

- Falls, smashed and pinched extremities
- Rollover/egress procedures
- Risks and contact with high voltage power lines

These items will include classroom portions and a hands on / driver training portion.

Subj: Armored Vehicle (MRAP)

1. Jurisdiction size including MOU's with surrounding counties is approximately 2729 Square miles . We have MOU's with Sebastian , Franklin , and Washington counties in Ar. And Sequoyah in Ok . Also with Arkansas State Police .
2. Our county population is 66,000 . Total with MOU's is 418,710 .
3. Our department has 32 full time deputies . Our SRT (SWAT) team has 13 members when all slots are filled.
4. We will be using the vehicle for SWAT, barricade suspects, hostage rescue, active shooter, natural disasters rescue, High profile Felony warrants .
5. We would like to request (1) MRAP Maxx Pro .
6. Vehicle will also be used in serving warrants with DEA. We currently have one Deputy working with DEA full time. When I-49 is completed , this will be a major North-South East-West intersection where large amounts of drug trafficking will be coming through . We have 25 miles of I-40 and 20 miles of I-49 as well as State Hwys 59 and 71 going all the way through the county North and South.
7. We currently have no armored vehicles .
8. The vehicle will be kept behind secured and locked fencing with monitored video surveillance or inside locked building with video surveillance and monitored security system.
9. We have the resources to maintain and repair the vehicle through a yearly budget for repair, maintenance, fuel, and oil for a fleet of approximately 50 vehicles.
10. Crawford County has the 2nd largest criminal docket in the state behind Pulaski County . We have also had a shooting in our courthouse in Sept. 2011.
11. We have a HIDTA directly to the north of us (Washington County) and one directly to the west of us (Sequoyah County) both of which have the major Interstates running through them as we do.
12. Cpl. Monty McMillan, CLEET instructor from the Fort Smith Police Department, will provide MRAP Vehicle Operations Training approved by CLEET Standards. This training is directly from CALL (Center for Army Lessons Learned) MRAP handbook. Cpl McMillen will complete this training as soon as possible, after obtaining vehicle.

Driver Requirements:

Completion of Basic MRAP Operations and / or equivalent training at the discretion of the Chief of Police.

Commercial Drivers License Not required.

Hot Springs Police Department S.W.A.T. Training

Cover Sheet

Subject: MRAP Operations

Duration of Class: 8 hours

Level of Instruction: Basic

Target Group: Hot Springs Police Department S.W.A.T. Team

Course Prepared by: Ofc. Eric Wacaster

Revisions: N/A

Date of Instruction: 5/5/15

Location: Hot Springs Airport.

Hot Springs Police Department S.W.A.T. Training

Course Summary Sheet

Course Title: MRAP Operations

Purpose of the Course: To familiarize Hot Springs Police Department SWAT Operators with basic MRAP functions, preventative maintenance, and driving operations of the MRAP.

Objectives: At the end of the block of instruction the students will be able to successfully:

1. Identify the Power Plant and transmission, as presented by the Instructor.
2. Identify the control panel and identify all gauges and lights, as well as, switches, as presented by the Instructor.
3. Identify the routine maintenance required, as presented by the Instructor.
4. Demonstrate familiarity with the passenger capacity, as well as load weights, as presented by the Instructor.
5. Demonstrate familiarity with the Vehicle Operations, as presented by the Instructor.
6. Demonstrate familiarity with vehicle recovery operations, as presented by the Instructor.

Certification: Eric Wacaster is a police officer and SWAT Team member with the Hot Springs Police Department. He is a certified police and firearms instructor through the Commission on Law Enforcement Standards. He is also a certified Force on Force instructor through General Dynamics. Ofc. Zac Rostan will assist with instruction. Ofc. Rostan is a police officer and SWAT team member with Hot Springs Police Department as well as a staff sergeant in the United States Army Reserve. Ofc. Rostan is a veteran of multiple overseas deployments where he has operated MRAPs in theater. He has also trained multiple other soldiers in the use and operation of MRAPs.

Hot Springs Police Department S.W.A.T. Training

Course Outline

I. Introduction

A. General vehicle familiarization and identification

1. Power Plant
2. Transmission
3. Control Panel
4. Lights, switches, and gauges

II. Body

A. Routine and Preventative Maintenance

B. Passenger Capacity and Load Limits

C. Vehicle Operations

1. Start up and Shut Down Procedure
2. Driving and Vehicle Clearances
3. Parking
4. Vehicle Recovery

III. Conclusion

- #### **A. Operators will correctly demonstrate all objectives back to the instructor**

Re: MRAP Vehicle

To Whom it May Concern,

This letter is to inform you that the Independence County Sheriff's Office has implemented policy for the operation and training of the MRAP vehicle obtained through the LESO/1033 program. The purpose of this vehicle is to be used by the Independence County Sheriff's Office for the protection of officers from potential gunfire during high risk operations and to assist the citizens of Independence County during natural disaster events to navigate through extreme terrain or drive over damaged areas to assist citizens.

Only officers who are trained in the operation of the MRAP will be allowed to operate it. Those who are authorized to operate the MRAP vehicle at this time are former United States Military members who have past training and actual field experience driving an MRAP vehicle. Those Officers are:

Deputy Johnny Byler
Deputy Andrew Rogers

During the month of June 2015, other officers will be receiving instruction and training on the operation of the MRAP vehicle, to include topics covered in training material produced by the Center for Army Lessons Learned. The Independence County Sheriff's Office recognizes that the this vehicle is property of the United States Government and assigned to this agency. If and when this agency no longer has a need for this vehicle it shall be transferred back to another LEA, or returned to the United States Government.

Respectfully,

A handwritten signature in blue ink, appearing to read "Steve Jeffery", with a long horizontal flourish extending to the right.

Steve Jeffery
Sheriff

To: Whom it may Concern

From: Lt. Brett Hibbs

Date: January 14, 2015

Ref: MRAP

The following documentation is intended to document to intended use and training of the Mine Resistant Ambush Protection Vehicle, which was allocated to the Jacksonville AR Police Department, by the United States Government.

The Jacksonville Police Department recognizes this vehicle is the Property of the United States government and assigned to this agency, if and when this agency no longer has a need for this vehicle it shall be transferred to another LEA, or returned to the United States government.

Respectfully,

Lt. Brett Hibbs

Jacksonville Police Department AR

Special Response Team Commander

COURSE:

MRAP Driver Training

LESSON TITLE:Mine Resistant Ambush Protection Vehicle Operations

DURATION:

8.0 Hours

TRAINING LEVEL:

Special Response Team Officers

PREPARED BY: Brett Hibbs

CLEET Instructor

Number of Trainees: 8

Date: 7-19-2014

METHOD OF PRESENTATION:

Lecture, Visual Aid, Practical

INSTRUCTOR: Brett Hibbs

LEARNING GOAL: The student will become familiar with the basic Operations of the Mine Resistant Ambush Protection Vehicle (MRAP).

PERFORMANCE OBJECTIVES:

1. The student will be able to identify the Power Plant and transmission, as presented by the Instructor.
 2. The student shall be able to identify the control panel and identify all gauges and lights, as well as, switches, as presented by the Instructor.
 3. The student shall be able to identify the routine maintenance required, as presented by the Instructor.
 4. The student shall be familiar with the passenger capacity, as well as, load weights, as presented by the Instructor.
 5. The student shall be familiar with the Vehicle Operations, as presented by the Instructor.
 6. The student will perform driving maneuvers in roadway in a 5 mile course.

Mine Resistant Ambush Protected (MRAP) Vehicle Standard Operating Procedure (SOP)

Effective Date: January 13, 2015

Revisions: None

PURPOSE:

The Jefferson County Sheriff's Office obtained a Mine Resistant Ambush Protected (MRAP) Vehicle through the LESO 1033 Program. The Jefferson County Sheriff recognizes and appreciates the uniqueness of this vehicle. The purpose of this vehicle is that it will be utilized by the Jefferson County Sheriff's Office for the protection of law enforcement officers and citizens during high risk operations for the safety of persons from threats such as but not limited to potential gunfire. Additional uses of this vehicle will be to assist citizens during natural disaster events to navigate through extreme terrain or to drive through damaged areas to assist citizens affected by such disasters.

MAINTENANCE AND STORAGE:

1. The vehicle shall be secured from public access during storage. This can be accomplished minimally by locking doors, turning off all power systems, and/or by storage in a secure building or structure from public.
2. The vehicle will be kept maintained in a safe and sustainable operating condition and will be in a response capable condition at all times.
3. Any conditions identified during inspection and maintenance that may render the vehicle unsafe for use shall require that the vehicle be taken out of service, tagged, and notification made to the SRT Commander and/or Operations Commander immediately. The vehicle shall not be used until such time that it has been repaired and/or rendered safe to operate.

TRAINING AND OPERATION:

1. No officer will be allowed to operate the vehicle without training.

2. The training may be completed by in-service staff instructors, who have completed a train-the-trainer course, or by a contracted company or trained military member who has extensive experience or qualifications with this type of vehicle.
3. Training shall include classroom instruction and a hands on / drivers training components.
4. The training shall at a minimum consist of the following:
 - Overview of the vehicle to include its capabilities and limitations.
 - Characteristics of the vehicle so the operators will have a knowledge of its size and weight.
 - Basic Preventative Maintenance Checks & Services (PMCS).
 - Safe operating speeds.
 - Steering, movement and maneuvering.
 - Visibility concerns.
 - Operation of controls and indicators.
 - Ground guide techniques for safe operation.
 - Operation on slopes.
 - Restricted terrain.
 - Rollover hazards and egress procedures.
 - Mount and dismount.
 - Falls, smashed, and pinched extremities.
 - Use of seatbelts.
 - Risks of contact with low hanging objects such as power lines.

**LITTLE ROCK POLICE DEPARTMENT
DIVISIONAL OPERATING PROCEDURE**

AVIATION UNIT

DATE: 04/26/2012	DISTRIBUTION: DIVISIONAL	REPLACES: NEW	NUMBER: 5600-12
-----------------------------------	---	--------------------------------	----------------------------------

I. Purpose

- A. The magnitude of demands for police service increases as today's society becomes more mobile and affluent. It becomes more evident that rapid mobility, providing swiftness of response, in all areas of police service is essential. The growing complexity of police work has resulted in an increase in specialization and some modification in the previously accepted concept of patrol duties. The successful implementation of the preventative patrol concept requires adaptation of new techniques to our patrol efforts.
- B. The objectives of the program are directly related to the insertion of helicopters into the patrol function. The following examples serve to emphasize the desired objective:
 - 1. Supporting and coordinating patrols and the protection of life and property;
 - 2. Traffic control and surveillance;
 - 3. Crime prevention;
 - 4. Criminal surveillance;
 - 5. Search and rescue;
 - 6. Special surveillance details;
 - 7. Apprehension of offenders; and,
 - 8. Cover for ground elements.
- C. The above examples of objectives to be accomplished have one factor in common. Cooperation between ground units and aircraft is essential. The capabilities of the patrol car and aircraft can do much to achieve these goals only when they are used in a coordinated effort to support each other. It is evident, therefore, that the success of this program requires the active support of every member of our Department.
- D. Accountability - The Aviation Unit is supervised by the Aviation Unit Sergeant. The Aviation Unit Sergeant is also the Special Events Coordinator who is directly responsible to the Aviation Unit Lieutenant, who is the Special Units Commander. The Aviation Unit Lieutenant is directly responsible to the Headquarters Division Commander.

1. The Aviation Unit observers are supervised by the Aviation Unit Sergeant.
2. The Aviation Unit Sergeant will be available as needed on a part-time basis unless special mission assignment details his/her additional presence.
3. The Aviation Unit's hours of assignment will be varied according to the needs of the Department.
4. In the event that an observer or alternate is not available for duty for any reason, the Aviation Unit Sergeant will amend his/her hours to man the shift.

II. Responsibility

A. Aviation Unit Sergeant Responsibilities

1. Be familiar with and obey all General Orders, Directives, and Rules and Regulations of the Little Rock Police Department;
2. Coordinate and formulate plans for the operation of the Unit's aircraft and related activity;
3. Keep the Aviation Unit Lieutenant informed of all operational phases of the Aviation Unit;
4. Acquaint all personnel under his supervision with such orders, directives, and policies requiring compliance;
5. Be aware of the training needs of the members of the Unit and ensure that the necessary training is provided;
6. Closely evaluate personnel assigned to the Unit during their training, in accordance with existing procedures;
7. Assume the responsibility for the supervision of all assigned duties to ensure the efficient and proper performance of such duties;
8. Develop and implement a public relations program that will tend to achieve public acceptance and approval of the Departmental use of the aircraft;
9. Ensure that required reports are properly submitted by himself and members of the Aviation Unit;
10. Establish and maintain an effective relationship with the FAA;
11. Assist in the formulation of plans for the operation of the Aviation Unit;
12. Maintain schedules and supervise activity of the part-time observers, pilots and mechanic assigned to the Unit.

13. Oversee the LESO 10-33 program in which government property may be obtained for the police department.
 - a) Supervise and ensure the quarterly inventories of items obtained from the 10-33 program are conducted and maintained pursuant to Departmental guidelines regarding records retention.
14. The Aviation Unit Sergeant will ensure that all flight and maintenance operations of the unit are maintained in accordance with the current Federal Aviation regulations and manufacturers' requirements. He/she will ensure that all pilot and medical certificates required by the Department and the Federal Aviation Administration (FAA) are maintained in accordance to established regulations and guidelines.

B. Observer Responsibilities

1. General

- a) The part-time observers are assigned to the Headquarters Division for operational purposes and report to the Aviation Unit Sergeant.
- b) Prepare and submit written reports, as required, by proper authority.

2. Function

- a) Ascertain operational assignments and coordinate this information with the pilot.
- b) Become knowledgeable with available information concerning any assigned flight.
- c) Assure that all necessary auxiliary equipment is operational and properly stowed on board the aircraft.
- d) Be alert for any condition that could affect the safe operation of the aircraft.
- e) Ensure that all police communications equipment is operational.

3. Observer In-Flight Responsibilities

- a) Be alert for aircraft, obstructions, or unsafe conditions, which may affect the safe operation of the aircraft.
- b) Comply with the directions from the pilot on any matter pertaining to the safe operation of the aircraft.
- c) Operate auxiliary equipment as required.

(1) Required equipment: An operable fire extinguisher, first aid kit and emergency locator transmitter (ELT) shall be kept in each aircraft at all times while the aircraft is being used.

- d) The observer will be responsible for all police communications.
- e) The observer shall be familiar with the City's streets, patrol districts, and City boundaries.
- f) Will operate the Nightsun and FLIR, the Downlink Video System, the ProNet System and the public address systems as needed.
- g) Will remain alert for activity or persons of a suspicious nature within their assigned patrol area and coordinate an investigative response from a ground patrol unit.
- h) Will record all activity participated in by the aircraft and maintain the Shift Summary.
- i) If a landing is at a location other than an authorized airport or heliport, the observer will exit the aircraft and assume a position where he may observe the approach of any person or vehicle and maintain a clear area near the tail rotor during helicopter ground operations.
- j) In-Flight Operation of Nightsun
 - (1) Good judgment must be utilized in the use of the light;
 - (2) Position the light toward the objective prior to ignition;
 - (3) Coordinate the use of the light with the officers on the scene;
 - (4) After arrival of the ground units, illuminate that portion of the area not covered by officers, if so requested;
 - (5) The light should not routinely be used when operating in close proximity of a freeway, or major thoroughfare, where a motorist might be momentarily blinded;
 - (6) The light will not be used on regular patrol in a residential area;
 - (7) Every effort will be made to prevent the illumination of officers on the ground unless it is at their request;
 - (8) The observer will have the responsibility to maintain Nightsun discipline; and,
 - (9) Prior to take off and landing, ascertain that the Nightsun is in the stow position and the cooling fan is operating properly.

C. Pilot Responsibilities

1. Pre-Flight

- a) Ascertain available weather reports and forecasts. If the temperature drops below 20 degrees Fahrenheit, the aircraft will be stored in the hangar, unless the aircraft is to be used within one hour. (During periods of severe weather, pilots will monitor the available weather radar.)
- b) Conduct a thorough preflight inspection of the aircraft he is to fly, to include the Nightsun for proper operation of cooling fan and freedom of movement.
- c) Place his initials in the preflight column on the Aircraft Flight and Service Record.
- d) Conduct operational check of the aircraft as required.
- e) Ensure that all persons aboard the aircraft are properly utilizing restraining belts and/or harnesses.
- f) Ensure that loaded weight does not exceed specified limitations for the aircraft and that it is distributed as required for safe operation.
- g) Check the Hobbs meter time against maintenance schedule to make sure the aircraft is not due scheduled maintenance.
- h) Be knowledgeable of and adhere to pilot's checklist concerning engine pre-start, start, run-up and shutdown.

2. In-Flight

- a) Be observant at all times for obstructions and other aircraft and yield the right-of-way to other aircraft as required by authority.
- b) When applicable, establish and maintain radio communications with the appropriate air traffic control center and comply with its directions and established procedures as required by authority.
- c) When applicable, ensure that proper lights on the aircraft are illuminated as required by authority.
- d) Operate the aircraft so that the assigned mission can be completed in the most effective and efficient manner.
- e) Maintain 500 feet above ground level (AGL) for daylight and 800 feet (AGL) above ground level (AGL) at night, for regular patrol duties.
- f) Be familiar with all known obstacles within the assigned area and remain alert for new or unknown obstacles.
- g) The pilot will be responsible for radio communications with control towers and other aircraft.

- h) If a landing becomes necessary at a location, other than an authorized airport or heliport, the pilot will review the following prior to landing:
 - (1) Wind direction and velocity;
 - (2) Flight hazards surrounding the area;
 - (3) Hazardous debris in the area;
 - (4) Surface of landing area;
 - (5) Load capacity on takeoff; and,
 - (6) When an unscheduled landing is necessary, the Communications Center will be notified and advised of the reason and location. Notification will be given when the aircraft is back in service. An Officer's Report shall be compiled, detailing the reason for the unscheduled landing and it shall be reviewed by the officer's Chain of Command.
- i) The pilot will have the final responsibility for the safe and proper operation of the aircraft.
- j) The pilot will be responsive to the requests of the observer in order to accomplish the police mission; however, the pilot will not operate the aircraft outside the confines of safety requirements.
- k) The pilot will position the aircraft so as to enable the observer to have maximum visibility of the area being patrolled or the scene being searched.
- l) Special attention will be given to the altitude and attitude of the aircraft in relation to the area to be covered by the observer when using the Nightsun so that a minimum amount of movement with the light will be required to keep the scene illuminated.

3. Post Flight

- a) The pilot will conduct a walk-around inspection of the aircraft.
- b) The pilot will ensure refueling of the aircraft, as necessary.
- c) The pilot will ensure storage and protection of the aircraft, and Nightsun equipment, and will secure the rotor blades on the OH-58A, if the wind is in excess of 25 knots.
- d) The pilot will conduct post-flight inspection of the aircraft and initial the post flight column in the aircraft flight and service record.
- e) The pilot will execute all necessary reports.

- a) All authorized pilots for the Aviation Unit will undergo a second-class medical examination at least once every twelve (12) months.
- b) Authorized pilots who do not comply with the above instructions will be suspended from flying until such examination is completed.

2. Transportation of Passengers/Riding Observation

- a) Passengers will be placed in the back seat. Orientation flights will only be conducted in conjunction with an official flight for Police personnel.
- b) Each observer/passenger should be briefed prior to his first flight of the day. The pilot is responsible for conducting the briefing, which should include the following:
 - (1) Proper wearing of seat belts and harnesses;
 - (2) Proper storing of all loose equipment;
 - (3) Proper use of auxiliary equipment (P.A. system, lights, etc.);
 - (4) Keeping observer's/passenger's hands and feet off of the controls;
 - (5) Cautioning observers/passengers of the turning of the rotor blades when leaving the aircraft;
 - (6) Unloading of all observers/passengers while refueling; and,
 - (7) No smoking within 50 feet of the aircraft or on the aircraft during flight.
- c) Only those persons categorized as being mission essential by the Office of the Chief of Police will be permitted to ride as observers in Departmental aircraft. Non-sworn personnel will be required to sign a Waiver of Liability prior to boarding the aircraft.

J. Emergency Reports and Landings

- 1. Accidents or incidents involving damage to the helicopters or injury to personnel will be reported as prescribed by Departmental General Orders.
- 2. In the event of an emergency landing, the officer will secure the helicopter and immediately notify an Aviation Unit supervisor.
- 3. No attempt to fly the aircraft will be made until the aircraft has been inspected and cleared for flight by qualified maintenance personnel.
- 4. All maintenance to Departmental aircraft will be performed by a licensed A and P mechanic or facility.

- f) The pilot will report any mechanical deficiency or aircraft damage to the Aviation Unit and record the deficiency in the Maintenance Logbook.

4. Miscellaneous

- a) Operate the aircraft for any maintenance test requiring lift-off or engine run up.
- b) Pilots will not land at the scene of incidents for any reason less than an emergency.
- c) For safety purposes, every reasonable attempt should be made to keep unauthorized persons at least 50 feet from the aircraft; this includes vehicles.

III. Operating Procedures

- A. The following outlines operational, functional, and miscellaneous procedures to be followed by the flight crew. These procedures provide guidelines, which shall be strictly adhered to by all Departmental personnel.

1. Pilot Authority

- a) The pilot is directly responsible for, and is the final authority as to the operation of the aircraft.
- b) The pilot may, in an emergency requiring immediate action, deviate from the rules of this Divisional Operating Procedure to the extent required to meet that emergency. When any such deviations occur, the pilot and observer shall provide a written Officer's Report (5600-2) of that deviation to the Headquarters Division Commander.

2. Functional

- a) Maximum continuous flight, on a normal patrol schedule, shall not exceed two hours.
- b) Consideration must be given to assure a thirty-minute fuel reserve in all flights.
- c) Maximum flight time per shift shall not exceed two hours, except under emergency conditions, or when police incidents mandate extended flying time.
- d) At no time will the aircraft be left unattended while the engine is operating.
- e) The designated pilot is the only person authorized to operate flight controls and/or aircraft systems.
- f) Command Pilot Qualifications

- (1) Pilots must have at least a Commercial Rotorcraft - Helicopter rating from the FAA;
- (2) Pilots must have a minimum of 1000 hours of helicopter flight time.
- (3) Pilots must pass a yearly check ride given by a Pilot, who is a certified civilian Flight Instructor; or a military flight instructor. A Military annual check ride, conducted by the United States military meets this requirement. All pilots are required to provide documentation of the annual private or military Check ride.
- (4) Recurrence check rides will be required annually to conform to FAA regulations on or before the anniversary date of the original check ride.
- (5) The pilot shall possess, maintain, and insure validity of all certifications and ratings, as required by authority, necessary for the pursuance of designated functional duties; and
- (6) Prepare and submit proper reports, as required by authority.

3. Miscellaneous

- a) Report any accident involving the aircraft or crew, required by proper authority.
- b) Report to an Aviation Unit Supervisor any illness or injury, the effects of which could jeopardize the safe operation of the aircraft.
- c) Ensure that the aircraft is properly equipped for the assigned mission.
- d) Unauthorized flights will not be made, nor will unauthorized personnel be transported in the aircraft. The following persons are authorized to ride in City owned aircraft:
 - (1) Police Officers employed by the City;
 - (2) Employees of the City when on official business;
 - (3) Law Enforcement personnel from outside agencies must have prior approval of the Aviation Unit Commander;
 - (4) Persons other than those listed above must have prior approval of the Division Commander or a Chief;
 - (5) All ride-a-longs will be limited to routine patrol flights unless prior approval is granted by the Division Commander or a Chief;

- (6) All passengers other than police officers employed by the city will complete the appropriate ride-a-long form prior to each flight.

B. Patrol Procedures

1. Types of Helicopter Patrol

a) Preventative Patrol

- (1) Scheduled flights over pre-designated areas for the purpose of routine police observation.
- (2) Performing patrol similar to ground patrol elements, with the primary objective being the prevention of criminal acts.
- (3) Aerial patrol coverage with the capability to respond to calls for service or requests for assistance in any area of the City.

b) Selective Patrol

- (1) Crimes of a serious nature or of a particular pattern may require the use of the helicopter over a specific area at a particular time. Areas of coverage may be determined by statistical analysis conducted by the Crime Analysis Section.
- (2) Selective patrol may be performed by the aircraft independently, or in a coordinated effort with ground units.
- (3) In a coordinated operation, the aircraft personnel will direct ground elements to the location of suspicious persons or activity and maintain surveillance of such activity until the investigation is completed.

2. Aerial Surveillance - Overt Surveillance

- a) Surveillance performed in an open manner with no attempt to conceal the identity of the aircraft.
- b) The primary use of overt surveillance will be in locating suspects or vehicles and maintaining observation until investigation or ground units make apprehension.
- c) Other types of overt surveillance include aerial reconnaissance of crowds, sporting events, fires, and major accidents.
- d) Speed and altitude will vary as needed.

3. Tactical Air Coordination

- a) Certain situations may develop that require the adaptation of tactical plans to affect the police objective.

- b) Under these conditions, command personnel may have an immediate need for aerial reconnaissance to determine manpower deployment or alternative courses of action.
- c) Tactical air coordination flights will be of two types:
 - (1) Informative flight: The Aviation Unit personnel will function as the "eyes" of command personnel by channeling pertinent information to them.
 - (2) Command flight: Command personnel will personally make aerial reconnaissance in the helicopter.
- d) Situations which may require an informative or command flight include:
 - (1) Major gatherings or parades;
 - (2) VIP security deployment;
 - (3) Major disasters such as fires, explosions, floods, etc.; and,
 - (4) Civil disorders or demonstrations.

4. Rescue Operations

- a) In cases of extreme emergency, where all other acceptable means of rescue have been exhausted, the aircraft may be requested to perform a rescue operation. (This option will be available only after the Aviation Unit personnel have received sufficient training to adequately perform the rescue attempt.)
- b) Water rescue operations should not be conducted over open water at night. Rescue ring operations should not be attempted when the victim is not stationary in moving water. In performing rescue operations, certain factors must be considered. These should include, but not be limited to:
 - (1) Condition of person to be rescued;
 - (2) Hazards to flight such as buildings, towers, wires, etc.
 - (3) Weather; and,
 - (4) Time of day.
- c) The pilot for the flight will have the final decision as to whether he and the equipment are capable of successfully completing the rescue.

5. Calls Outside Little Rock City Limits

- a) Contiguous Cities

- (1) The Headquarters Division Commander or in his absence, the Section Commander, may approve requests for aircraft service in cities contiguous to Little Rock.
 - (2) Requests should be limited to police emergencies and extended car chases. A police emergency is defined as an on-going, life threatening situation, where the aircraft can be of definite, positive assistance.
- b) Non-Contiguous Cities - Requests for aircraft service in non-contiguous cities must be approved by the Division Commander or Bureau Commander unless an emergency situation exists.
 - c) The Aviation Unit Lieutenant and the Aviation Unit Sergeant will be notified as soon as possible of any newsworthy or sensational incidents involving the aircraft's use outside the City Limits of Little Rock.
 - d) At no time will a request for aircraft service outside the City of Little Rock be approved if the aircraft is needed within the City.

IV. Local Flying Regulations

A. General

1. Purpose - The purpose of this section is to provide information and guidance, prescribe general policies to all Police Department personnel utilizing the facilities at Airports, and further establish local flying regulations for all flights by Police Department personnel within the City of Little Rock.
2. Scope
 - a) Policies and procedures contained in this section are directive in nature and supplement existing directives of the Department and Federal Air Regulations.
 - b) Additions, deletions, and amendments will be published as required. Recommendations for revisions should be submitted to the Headquarters Division Commander.
 - c) Violations or deviations from these regulations, including forced landings, must be reported to the Headquarters Division Commander.

B. Flight Regulations

1. Aircraft Clearances - Flights conducted under a local flight clearance are subject to the following restrictions:
 - a) Must adhere to Visual Flight Rules (VFR) at all times;

- b) During Instrument Flight Rules (IFR) conditions, within the Adams Field class "C" airspace, a special (VFR) clearance must be requested from the proper clearance authority, before departing or entering the airspace; and,
- c) Flights within the Little Rock Adams Field control zone, during (IFR) conditions, shall be coordinated with the proper FAA controlling agency.

2. Air Traffic Regulations

- a) These regulations establish control of aircraft operations within the confines of airports. Except as listed herein, normal air traffic control procedures as outlined in the FAA Regulations, will govern.
- b) All pilots will use caution at all times when hovering, landing, or taking off behind or near other aircraft because of turbulence. Aircraft will be located at a safe distance as not to interfere with other aircraft that are in the process of engine run-up or shut-down.
- c) The capability of helicopters to operate from unimproved areas is recognized and as a general policy, helicopters may be operated anywhere within the city limits, however, the pilot has the responsibility for adherence to appropriate regulations and use of caution and sound judgment while operating over the City.

3. Landing and Take-Off Areas

- a) Aircraft may use any designated area for operating at airports when the control towers are in operation. When towers are not in operation, helicopters will utilize only the designated landing areas. Wind direction will dictate which pad to land on.
- b) An emergency involving safety of personnel or equipment may require immediate actions and decisions that may deviate from appropriate regulations.

C. Weather

1. Weather Minimums

- a) Visual Flight Rules (VFR). Flights may be conducted under VFR only when the ceiling is 800 feet or more and the visibility is two miles or more within the control zone and both are forecast to remain for the duration of flights.
- b) Special VFR Flight. The purpose of a special VFR clearance is to permit entry into, or departure from an area below VFR minimum. A special VFR clearance must be requested from the tower before entering or departing the control zone. (Exception: Helicopter visibility is ½ statute mile for daylight operation and one (1) statute mile for night time operation.)

c) Visual Flight Rule Minimum

(1) Remain clear of clouds and maintain visual contact with the ground.

(2) Helicopter flights are restricted from VFR flights at night, unless a visible horizon or suitable reference is apparent outside the cockpit.

2. Maximum Wind Conditions

a) Maximum wind velocities for aircraft operations are established below for aircraft assigned to the Aviation Unit. The aircraft will not be required to be flown on regular patrol when winds equal or exceed the winds specified in the aircraft manufacturer's handbook. Critical crosswind components will be determined from the pilot's handbook.

b) Although "Down For Wind" conditions do not necessarily prohibit the answering of radio calls, whether or not to respond will be at the discretion of the pilot.

D. Hangaring Aircraft

1. All helicopters will be placed in the hangar when:

a) Any type weather conditions prohibit flight. This will be done immediately by on-duty flight personnel.

b) Outside temperature falls to 20 degrees or lower, unless the aircraft is to be used within one hour.

c) It will not be used on the next shift. This will be the responsibility of the off going crew.

2. Ground Handling

a) A minimum ground crew of two will be used to hangar the helicopter for safety reasons.

b) Helicopters may be towed in or out of the hangar with the tractor, provided proper caution and a ground guide is used. All aircraft will be backed, tail first, into the hangar.

c) Caution should be used when placing the tow dolly under the helicopter. Ascertain that it is properly aligned to prevent cross tube and skid damage.

E. Aircraft Radio Procedures

1. All aircraft, when operating within the boundaries of Adams Field, will monitor the appropriate radio frequency at all times.

2. In the event of loss of communications during SVFR, flights shall be expected to proceed directly to the nearest suitable landing site, and then advise Adams Tower by telephone.

F. Refueling and Service Procedures

1. Refueling Procedures

- a) Aircraft to be fueled will be located a safe minimum distance from buildings, structures, and any other probable sources of ignition. The aircraft will be grounded prior to refueling.
- b) Aircraft will only be refueled with the engine running in emergency situations ("Hot" Refueling). The pilot retains the authority to prohibit "Hot" refueling under any situation, including emergencies.
- c) No person will remain in any aircraft while it is being refueled, (except emergency "Hot" refueling).
- d) The observer should assist in refueling the aircraft.

G. Duties and Responsibilities of the Maintenance Coordinator/Mechanic

1. The Maintenance Coordinator/Mechanic shall be under the direct command of the Aviation Unit Commander. The Maintenance Coordinator/Mechanic is responsible, but not limited to the following:
 - a) The Maintenance Coordinator/Mechanic shall be a licensed Airframe and Power plant mechanic. He shall attend the recommended factory maintenance schools for any aircraft that he is required to maintain for the City that he does not have adequate maintenance experience with; The purpose of the Maintenance Coordinator/t Mechanic is to perform maintenance on aircraft airframe and power plant assemblies and to certify the airworthiness of the aircraft after maintenance has been performed.
 - b) He/She shall perform, or advise the Unit Commander to have performed, all necessary scheduled or unscheduled maintenance and/or inspections as required; All maintenance will be performed by an FAA certified A & P mechanic.
 - c) Verifies that all required inspections and maintenance has been performed .
 - d) He shall insure the aircraft engine and airframe logbooks are maintained and the proper entries are made in a timely manner.
 - e) Services and repairs aircraft using acceptable maintenance practices and procedures that ensure the aircraft remain in airworthiness condition.

- f) Performs aircraft inspections as required and necessary to ensure that aircraft remain in airworthiness condition and communicates with the pilots and observers to determine if they have discovered any maintenance problems with the aircraft;
 - g) The Maintenance Coordinator/Mechanic has the authority to Ground Run the aircraft to complete any maintenance checks that might be required as the result of any maintenance he has performed.
 - h) Assists the Aviation Unit Sergeant and Observers in maintaining a written parts inventory.
 - i) Performs other duties as required.
2. Nothing herein is intended to suggest the above described responsibilities are solely the responsibility of the Maintenance Coordinator/Mechanic. Pilots and observers assigned to the Unit will assist him with any or all of his duties as may be required to fulfill the duties of his assignment, without violating any Federal Aviation Regulation.

H. Safety

1. Smoking and Wearing of the Shoulder Safety Harness
- a) Smoking is prohibited within fifty (50) feet of fueling operations and helicopters.
 - b) Smoking is prohibited in the hangar area in accordance with current Department Directives.
 - c) Smoking is prohibited in the aircraft.
 - d) If the helicopter is equipped with a shoulder safety harness, it will be used at all times.
2. Uniforms
- a) The cleanliness and correct fit of uniforms is necessary to the proper appearance of all Police Aviation Unit personnel. The Unit supervisors will ensure that each member of the Aviation Unit is properly fitted with neat and correct uniforms.
 - b) The flight suits are the duty uniforms for Aviation Unit personnel.
 - c) Flight suits may not be worn to funerals and may not be worn to court.
 - d) Helmets or headsets WILL BE worn during all helicopter flights.

I. Administration

1. Medical Examinations

K. Miscellaneous

1. No officer will fire any weapon from the aircraft.
2. Doors may be removed from the aircraft only with an Aviation Unit's supervisor's approval. If removal for an emergency reason should become necessary, the Quick Release Pin should remain with the door. Proper care should be taken in removing and placing the doors in a secured area to prevent any damage. Appropriate airspeed limitations will be complied with.

V. Procedures for Radio Service Calls

- A. Aviation Unit personnel shall respond to all requests for service made by members of the Police Department.
- B. When on regular patrol, Aviation Unit personnel will respond to any call where the aircraft can be of use to the officers on the ground or assist in the arrest of a suspect.
- C. Effective communications is essential with the officers on the ground.

VI. Reports

- A. Shift Summary Reports are due daily as needed upon mission activity or an emergency call-out basis detailing the flight(s), specific activity conducted, etc...

VII. Annual Review

- A. The Sergeant of the Aviation Unit will do an annual review of the Unit.
- B. The Annual Report is due in December with the other end of the year reports for the Headquarters Division.
- C. An assessment will be made to determine the effectiveness of the program and the need for additional Aviation Unit personnel.

Little Rock, Arkansas 72201-1083

Re: Mine Resistant Ambush Protected Vehicle

Dear Mr. Ray:

On July 1-2, 2014, the Little Rock Police Department hosted course specific training for the Mine Resistant Ambush Protected (MRAP) Vehicle. This Department is in possession of two of these vehicles via the LESO program. The training was provided by Smith Integrated Technologies and consisted of vehicle familiarization, driving operations, location/function of controls and indicators, vehicle characteristics, emergency egress, warnings and cautions, operating under unusual conditions, and operator level trouble shooting. The training program was designed to help law enforcement mitigate risk to both officers and the public, and included both classroom and practical exercises. Certificates of completion for Department personnel who successfully passed the training course are attached.

Department policy mandates only personnel who have received specialized training in the operation of the MRAP be authorized to operate it. Policy also mandates operators possess a valid Arkansas Class D or higher vehicle operator's license, unit supervisors are responsible to ensure the vehicle is maintained in serviceable condition, and requests to utilize the vehicle be made to the Division Commander. The training course outline and Power Point is on file with this Department and available for your inspection should you desire. Please feel free to contact me if you have any questions.

Sincerely,

Wayne Bewley
Assistant Chief of Police
Field Services Bureau

City of Little Rock

Police Department

700 West Markham
Little Rock, Arkansas 72201-1329

MEMORANDUM

TO: Capt. Robertson
FROM: Lt. T. Calhoun #14461
RE: MRAP Training
DATE: June 17, 2014

The Department recently acquired two Mine Resistant Ambush Protected (MRAP) vehicles. The operator training, which will train officers as operators and enable them to train other operators, is scheduled for July 1st and 2nd at our Training Division. The training is a one-day 10-hr. course that costs \$175.00 per participant. Lt. Jackson has requested one slot for the Special Response Unit and Fleet Services has requested one slot for a mechanic. I request authorization to send Ofc. A. Metcalf (#21333 - a Department Defensive Driving Instructor) and S. Young (#31041 - has MRAP experience from the military) from the SWAT Unit to this training course. Lt. Jackson requested that Sgt. J. Plunkett (#18783) from the SRU attend the course and Mr. Walter Ederle (Fleet Services Operations Manager) will advise of a mechanic who will be designated to perform service work on the vehicles. Total cost of the training would be \$700.00.

Chief Finks,

LRPD is hosting the two training dates and will schedule our selected personnel to attend one of these dates. Other agencies that recently received a MRAP will receive training over these two dates. I recommend approval Capt. Calhoun 6.18.2014

Approved

Smith Integrated Technologies

To whom it may concern,

My name is Paul Smith and I am the President of Smith Integrated Technology Services. Our company has over ten years experience training Military, Law Enforcement, Border Patrol, and Homeland Security on M.R.A.P. New Equipment Training (NET). Our team is made up of former professional military instructors from M.R.A.P. University in Texarkana, TX where all service branches are sent to be trained and certified prior to deploying overseas in wartime scenarios. We specialize in all variants of M.R.A.P. vehicles. Our course includes vehicle familiarization, driving operations, location/function of controls and indicators, characteristics, emergency egress, warnings and cautions, operating under unusual conditions, operator level trouble shooting and OGPK/BPTMU (Objective Gunners Protection Kit/Battery Powered Motorized Traversing Unit) to name a few.

When the Department of Defense Surplus Program started issuing local police and sheriff's departments these tactical vehicles through the 1033 Program (SASP), we saw a need for specialized and skilled training on the operations of these vehicles, not only for tactical purposes, but for safety concerns. With an average of 40,000lbs and a cost of half a million dollars per vehicle, damage to personnel and equipment is a major concern. With our proven track record of instruction, we can help minimize the possibility of risk and injury to your department.

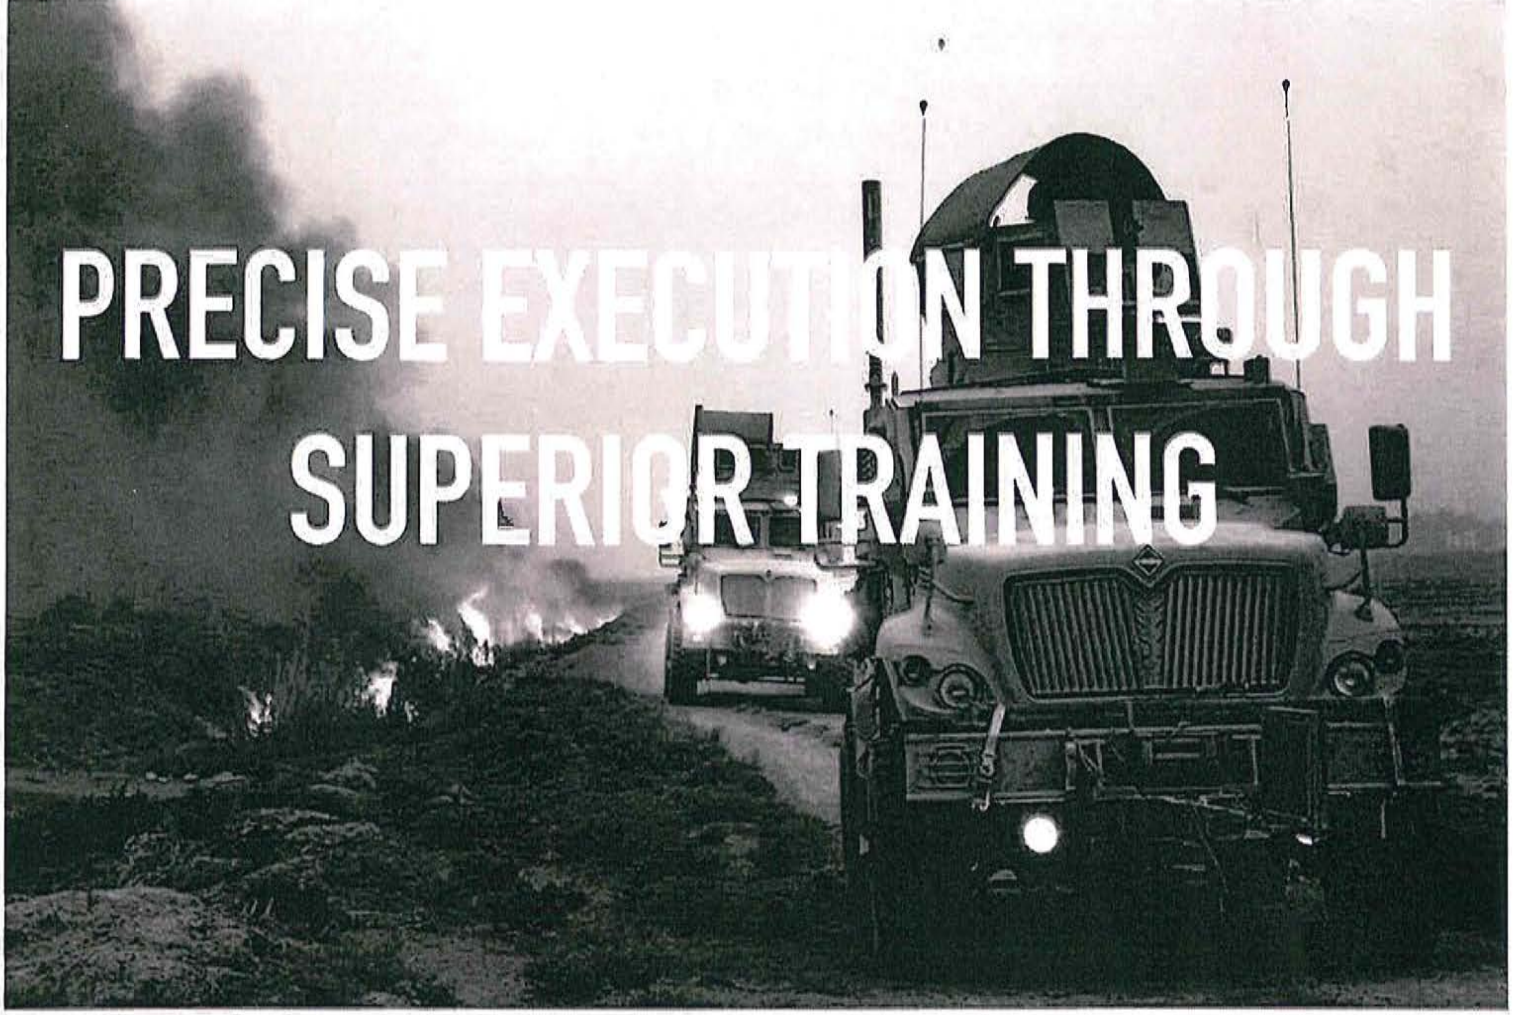

We realize not all organizations require the same guidelines; therefore, we're able to tailor a training schedule to meet the customer's individual needs. In addition, with our knowledge as an industry insider, we can assist with the acquisition of spare or damaged parts, schematics, wiring diagrams, C.O.T.S. (Commercial off the Shelf) manuals and more through D.R.M.O. (Defense Reutilization and Marketing Office).

Please call or email us to find out how we can best develop a training guide specific to the needs of your force. We will also proudly provide a military or law enforcement reference upon request.

Thank you

VR,

Paul Smith
President
(603) 531-9110

PRECISE EXECUTION THROUGH SUPERIOR TRAINING

Smith Integrated Technologies M.R.A.P. Training Program is developed strategically from the Department of Defense. Our mobile training team is comprised of certified M.R.A.P. University instructors with backgrounds training Military, Law Enforcement, Border Patrol, and Homeland Security personnel.

Custom training programs include vehicle familiarization, driving operations, location/function of controls and indicators, vehicle characteristics, emergency egress, warnings and cautions, operating under unusual conditions, operator level trouble shooting, and OGPK/BPTMU (Objective Gunners Protection Kit/Battery Powered Motorized Traversing Unit) to name a few.

This training program is designed to help law enforcement mitigate risk to both officers and the public. The class is comprised of a 10 hour day including a "Train the Trainer" powerpoint, a detailed hands on walk around the vehicle, and personalized driving instruction. In addition, Program of Instruction and Training Support Packages, Wiring Diagrams, Technical and Maintenance Manuals directly from the manufacturer are provided at no additional cost.

For additional information, please call or visit smithit.org.

Battle Creek, MI 49037

1. The Little Rock Police Department currently employs over 500 sworn officers.
2. The Aviation Unit currently supports our narcotic division, SWAT Team, and our Patrol Operations. The Aviation Unit is available to support and coordinate patrols and protect life and property, traffic control and surveillance, crime prevention, criminal surveillance, search and rescue, special surveillance details, apprehension of offenders and cover for ground elements.
3. The LRPD also maintains mutual aid response agreements with the other surrounding law enforcement agencies and cities to include: the City of North Little Rock, 44.8 square miles, census population of 62,304, the City of Cammack Village, .3 square miles, census population of 768, the City of Maumelle, 8.8 square miles, census population of 17,163, City of Sherwood, 20.6 square miles, census population of 29,523, City of Jacksonville, 28.1 square miles, census population of 28,364, City of Alexander, 2.2 square miles, census population of 2,901, the unincorporated areas of Pulaski County, 549.82 square miles, census population of 48,201. The Little Rock Police Department also maintains cooperative/mutual aid response assistance with the Arkansas State Police, the Arkansas State Capitol Police, the University of Arkansas Medical Science Hospital Police (UAMS), the University of Little Rock Police (UALR), Central Arkansas Veterans Hospital Police and the Pulaski Technical College Public Safety Department (PTC). The LRPD is also poised to respond to assist the law enforcement agencies located in the contiguous counties of Faulkner, Lonoke, Saline, Perry, Grant, and Jefferson.
4. High Intensity Drug Trafficking Area/HIDTA? The Little Rock Police Department is a member of the Gulf Coast HIDTA.
5. The Little Rock Police Department partners with Federal Agencies via task forces participation with FBI, DEA, U.S. Marshalls, and ATF. The City of Little Rock, which is

LRPD is Internationally Accredited by the Commission on Accreditation for Law Enforcement Agencies
The Little Rock Police Department is an equal opportunity employer

the state capitol of Arkansas, encompasses 116 square miles and has a census population of 193,525 in Pulaski County.

6. Geographic Responsibility? The Little Rock Police Department partners with Federal Agencies via task forces participation with FBI, DEA, U.S. Marshalls, and ATF. The City of Little Rock, which is the state capitol of Arkansas, encompasses 116 square miles and has a census population of 193,525 in Pulaski County.
7. The Little Rock Police Department currently has a hanger facility that is secured by two gates and its buildings are alarmed. The hangers are capable of housing five aircraft.
8. The Little Rock Police Department currently has a Department Operation Procedure for the use of the Helicopters. (See attached documents)
9. The Little Rock Police Department currently has two OH-58 helicopters.
10. We are requesting two TH-67 aircraft.
11. Fiscal wherewithal? The Little Rock Police Department will assume the responsibility of maintaining the physical maintenance and upkeep of the helicopters to ensure their operational readiness.
12. The Little Rock Police Department has three (3) certified pilots that are currently license to fly the current aircraft and the requested aircraft. (See attached Pilots license.)
13. The anticipated number of hours flown per year is 100.
14. Special considerations? The City of Little Rock is the state capitol for the State of Arkansas and has the majority of the approximately 70,000 of the state employees and central offices for their agencies and approximately 20,000 of the Federal employees to include the Eastern and Western Districts of the United States Federal Courts, the Bill and Hillary Clinton National Airport, the William Jefferson Clinton Presidential Library and the largest number of level 1 trauma centers and hospitals, which are the UAMS, Baptist Medical Center, St. Vincent's Infirmary, McClellan VA Hospital and Arkansas Children's Hospital.
15. I certify that our appropriate Local Governmental administration has approved of this allocation for the two TH-67 aircraft.

Protection Vehicle Operations

LESSON TITLE:

Mine Resistant Ambush

DURATION:

PREPARED BY: James Hall
4.0 Hours

TRAINING LEVEL:

Certified Law Enforcement Instructor
Full time Deputies
Number of Trainees: 5-10

Date: 2015

METHOD OF PRESENTATION:

Lecture, Questions & Answers, Visual Presentation

INSTRUCTOR: James Hall

LEARNING GOAL: The student will become familiar with the basic Operations of the Mine Resistant Ambush Protection Vehicle (MRAP).

PERFORMANCE OBJECTIVES:

1. Given an exam, the student will be able to identify the Power Plant and transmission, as presented by the Instructor.
2. Given an exam, the student shall be able to identify the control panel and identify all gauges and lights, as well as, switches, as presented by the Instructor.
3. Given an exam, the student shall be able to identify the routine maintenance required, as presented by the Instructor.
4. Given an exam, the student shall be familiar with the passenger capacity, as well as, load weights, as presented by the Instructor.
5. Given an exam, the student shall be familiar with the Vehicle Operations, as presented by the Instructor.
6. Given an exam, the student shall be familiar with vehicle recovery operations, as presented by the Instructor.

"Mission #1 is to Protect and Serve"

AUBRY D. COOK

SHERIFF

December 17, 2014

The Mississippi County Sheriff's Department has received a Mine Resistant Ambush Protected Vehicle (MRAP) via the LESO 1033 program. The MRAP will be utilized by the Special Response team of the Mississippi County Sheriff's Department for the protection of its officers during high risk operations where such officers may be subjected to gunfire while in the performance of their duties. The vehicle will also be utilized for other purposes such as significant weather events and natural disasters where the off road capabilities of the vehicle can be utilized to assist the citizens of Mississippi County during such disasters. The vehicle may also be used in public relations events to allow the public to observe the capabilities of the vehicle.

The Mississippi County Sheriff's Department has also implemented guidelines and training for the operation and maintenance of the vehicle. No officer will be allowed to operate the vehicle until he or she has completed a training course derived from military technical manuals and training materials and manufacturers manuals and training materials on the operation and maintenance of the vehicle.

Training topics are included but not limited to the following:

- An overview of the vehicle's capabilities and limitations.
- Characteristics of the vehicle so that operators have knowledge of its size and weight.
- Basic Maintenance
- Safe operation speeds and steering maneuvers
- Use of Ground guides due to limited visibility
- Operation on slopes
- Rough terrain driving
- Vehicle tip and rollover hazards
- Falls, smashed and pinched extremities.
- Rollover and Egress procedures.
- Use of Seatbelts
- Overhead obstacles such as risks of contact with overhead power lines.

Tel: (501) 340-6600 Fax: (501) 340-7080

June 8, 2015

Mr. James Ray, Law Enforcement Support Office

RE: MRAP

James:

As of 6/1/15, the Pulaski County Sheriff's Office (PCSO) has implemented a policy for the operation and training of the Mine-Resistant Ambush Protected (MRAP) vehicle obtained from the Law Enforcement Support Office (LESO). The purpose of the vehicle is for use by the PCSO Special Weapons and Tactics (SWAT) Team in the protection of personnel during high risk operations by providing safe cover from potential gunfire while in the performance of their duties. Additional uses of this vehicle are to assist the citizens of Pulaski County during natural disaster events to navigate through extreme terrain or traverse over damaged areas when aiding citizens affected by such disasters.

The policy contains guidelines for the operation and maintenance of the vehicle, based upon curriculum used in training established by the Center for Army Lessons Learned and published by the Combined Arms Center at Fort Leavenworth, Kansas, titled MRAP Vehicle Tactics, Techniques and Procedures. The training will consist of the following:

1. Overview of the vehicle to include capabilities and limitations.
2. Vehicle characteristics.
3. Maintenance.
4. Safe operating speeds.
5. Vehicle steering, movement and proper maneuvering.
6. Ground guiding techniques due to limited visibility.
7. Operations of slopes.
8. Restricted terrain.
9. Rough terrain driving.
10. Vehicle tip over and roll-over, to include egress procedures.

This training will include both classroom and practical hands-on exercises.

Sincerely,

A handwritten signature in black ink, appearing to read "Doc Holladay", with a large, stylized flourish extending from the end.

RE: MRAP

The Rogers Police Department intends to only allow personnel with appropriate training to use, operate, and maintain the MRAP assigned to the Rogers Police Department. Those designated personnel have already attended Joint Program Office Mine Resistant Ambush Protected Vehicle training through Smith Integrated Technologies. Future personnel assigned to those duties will attend a similar course or military equivalent prior to use or operation of the MRAP.

The Rogers Police Department recognizes that the MRAP is the property of the United States Government and is assigned to this agency for law enforcement use and that when this agency no longer needs this vehicle it will be transferred to another law enforcement agency or returned to the United States Government.

Re: Mine Resistant Ambush Protected (MRAP) Vehicle

To Whom It May Concern:

The Union County Sheriff's Office has implemented a policy for the operation and training of the MRAP vehicle obtained through the LESO/1033 program. The purpose of this vehicle is to be used by the Union County Sheriff's Office Special Response Team for the protection of officers during high risk operations for the safety of such officers from potential gunfire while in the performance of their duties. Additional use of the MRAP will be to assist the citizens of Union County during natural disaster events to navigate through extreme terrain or to drive over damaged areas to assist the citizens who are affected from the disasters.

The policy has guidelines for the operation and maintenance of the vehicle. It states no officer will be allowed to operate the MRAP without any training. The training will be conducted by a trained military member who has extensive training in use and operation by the United States Army and also has used the MRAP during deployments. All training curriculum used in training is derived from the Center for Army Lessons Learned published by the Combined Arms Center. The training will consist of the following:

- Overview of the vehicle to include its capabilities and limitations
- Characteristics of the vehicle so the operator will know the size and weight
- Basic maintenance
- Safe operating speeds
- Movement and maneuver
- Ground guiding techniques for safe operation in small areas due to limited visibility
- Operation on slopes
- Restricted terrain
- Rough terrain driving

- Vehicle tip and rollover
- Steering and proper maneuvering
- Falls, smashed and pinched extremities
- Rollover/Egress procedures
- Use of seatbelts
- Risk and contact with high voltage power lines

These items will include a classroom portion hands on drivers portion.

Sheriff Mike McGough
Union County Sheriff's Office
